

Double Diamond Project Krom

Topic

Cognitive Accessibility & Dyslexia Awareness

Goal

How can we raise awareness about dyslexia using a gamified website?

Phase 1: Discover (researching)

Objective: Understand the context, the client's needs, and the challenges faced by individuals with dyslexia.

CMD methods used:

- Community research (Lab)
- Explore user requirements (Field)

Research questions:

- What are Studio Krom's goals and expectations for the project?
- Who's the target audience, and what are their needs?
- What are the daily digital or reading-related challenges of people with dyslexia?

Activities Conducted:

- Interviewed a representative from Studio Krom to understand their mission and vision.
- Conducted secondary research on dyslexia, cognitive accessibility, and existing awareness tools.
- Held brainstorming sessions to explore potential directions for gamified experience.

Phase 2: Define

Objective: Synthesize findings into clear insights and define the problem to solve.

CMD methods used:

- Persona Development

- Expert Interviews

Research questions:

- What are the most common reading and writing challenges faced by people with dyslexia?
- How can those challenges be effectively simulated in a digital, interactive environment?
- How do different types of dyslexia (e.g., phonological, surface, visual) affect reading and comprehension
- How can these be represented in a gamified format?

Activities Conducted:

- Created user personas based on research findings
- Defined core challenges and user pain points to address
- Formulated a clear problem statement and project scope

Phase 3: Develop

Objective: Explore and prototype possible solutions to the defined problem.

CMD Methods used:

- Ideation workshops
- Prototyping
- Co-creation with users

Research questions:

- What are potential solutions that raise awareness and build empathy?
- What types of game mechanics best simulate dyslexic experience?
- What role does user feedback play in refining our concepts and visuals?

Activities conducted:

- Developed low-fidelity prototypes of the gamified experience
- Conducted user testing with peers
- Iterated on feedback, adjusting visual and interactive elements for better impact and clarity

Phase 4: Deliver

Objective: Finalize and present the solution based on tested ideas and user input.

CMD Methods:

- Usability testing
- Feedback loops
- Design critiques

Research questions:

- How do we test different solutions at a small scale?
- How do we refine the solution based on user feedback?
- What lessons can we learn from this process for future projects?

Activities planned:

- Run usability tests and collect structured feedback
- Finalize the visual and technical design of the website/and game
- Present deliverable to Studio Krom
